Aircraft Maintenance

Student For a Day

Interested in an exciting career in the aviation industry? Okanagan College in cooperation with Northern Lights College would like to give you the opportunity to check out their Aircraft Maintenance Engineering program at the Vernon Aerospace Campus of Okanagan College by letting you become a "Student for the Day"

Spend the day with students already enrolled in the program. You will sit in on the morning theory classes learning everything from Aircraft Drawings to Turbine Engine Maintenance, or Aircraft Fuel Systems and Helicopter Theory of Flight. Spend the afternoon in the hanger doing practical work from installing aircraft rivets to working with electrical control panels or maybe even overhauling a Reciprocating Engine. While in the shop you will be supervised one on one with an instructor from the College who will also fill you in on the apprentice program that you would enroll in to obtain a Transport Canada Aircraft Maintenance "M" License.

AME program Highlights

No wait lists (as of June 2009)

Limit of 17 students

Student Instructor ratio of 9 to 1

40% Theory, 60% Hands on

Transport Canada approved
Apprentice Program

18 months credit towards
AME license

Schooling completed all at once. No need to return to school
