The Program

The Computer Information Systems program is offered as a two year diploma or a four year degree. Graduates of the diploma (four academic semesters) can ladder directly into year three of the degree program (eight academic semesters).

Both the diploma and the degree programs offer a broad selection of computing, mathematics, business, and communications courses so graduates can function successfully in a variety of roles in a business organization, high-technology company, or government department.

These roles include positions as computer programmer, programmer/analyst, business systems designer/developer/analyst, web designer/developer, network administrator, and database architect/administrator.

The courses in the program are grouped into required courses (which all students take), courses from one or more options (an option is a collection of courses dealing with a specific area of computing), and elective courses. This allows students to concentrate on areas of computing (Software Design and Development, Computer Systems, or Database Systems) which interest them, while ensuring all graduates have a broad knowledge of computing.

What are the Benefits to Employers?

- An opportunity to evaluate employees without an obligation to permanent employment.
- A proven cost-effective method of meeting human resource needs.
- Co-op students and/or graduates are available on a year-round basis: January-April, May-August, September-December.
- Access to a pool of motivated, temporary employees for special projects, peak periods, vacation relief, coverage without costly advertising.

How do you hire Okanagan College Co-op Students?

E-mail: coop@okanagan.bc.ca
